

An indispensable tool in the dental practice

Test kit teeth for the BICOM CTT

The test kit teeth should not be missing in the dental practice where the Bicom is being used because it is a valuable addition for dental work. It not only allows a differentiated way to test but is also a very easy and fast way to successful treat your patients. The test kit not only has the necessary ampoules needed in dentistry but also the following ampoules:

Gingivitis	Inflammation of the gums extensive and borderless
Masticatory Disorder	This ampoule is used for blockages of the jaw or a cramping of the jaw muscles e.g. after a lengthy tooth or jaw treatment. At the end of the treatment one puts the ampoule in the in beaker and does a treatment with program 192.
Jaw Ostitis	Bone inflammation of the sockets, remaining ostities
Periodontitis	Inflammation of the socket periosteum, incl. dental pouch and osteoclasia
Pulpitis	Inflammation of the tooth nerves
Stomatitis	Inflammation of the mucous membrane, aphtae
Tooth Ulcers	Local defects of the tissue, pressure sore, accumulation of pus in the tissue
Tooth nerves	Teeth neuralgia, decomposition of the tooth nerves
Enamel	Stabilisation of the enamel
Root	Stabilisation of the root
Teething Aim	Relieves teething and aches

.... and much more.

Test Kit Teeth

(only suitable for test purposes)

T 1.1	T 2.1	T 3.1	T 4.1	Gingivitis (T 009)	Improve Wound Healing (T 019)
T 1.2	T 2.2	T 3.2	T 4.2	Masticatory Disorder (T 010)	Gingival Regeneration (T 020)
T 1.3	T 2.3	T 3.3	T 4.3	Jaw Ostitis (T 011)	Tooth Ulcers (T 021)
